## ABOUT MoA FUNDS

Mutual of America created its first mutual funds in 1985. Now, Mutual of America Capital Management manages an array of 28 mutual fund strategies that span domestic and international equities, fixed income, target date and allocation funds. With a team of over 20 investment professionals, we manage portfolios with a common goal — to provide investors with attractive returns over time while being mindful of risk.

**You should consider the investment objectives, risks, and charges and expenses of the funds carefully before investing. This and other information is contained in the funds' prospectuses and summary prospectuses, which can be obtained by calling 800.914.8716 or visiting [moafunds.com](http://moafunds.com). Read them carefully before investing.**

Mutual fund investing involves risk. Principal loss is possible. Investing in small- and mid-cap stocks involves risks including greater volatility and less liquidity than large-cap stocks. A passively managed fund attempts to mirror the composition and performance of an index. The Fund's returns may not match due to expenses incurred by the Fund or lack of precise correlation with the index.

The information contained herein: (1) is proprietary to Morningstar and/or its content providers; (2) may not be copied or distributed; and (3) is not warranted to be accurate, complete, or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information.

The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The Morningstar Rating does not include any adjustment for sales loads. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Past performance is no guarantee of future results.

Morningstar percentile rankings are based on a fund's average annual total return relative to all funds in the same Morningstar category. Fund performance used within the rankings, reflects certain fee waivers, without which, returns and Morningstar rankings would have been lower. The highest (or most favorable) percentile rank is 1 and the lowest (or least favorable) percentile rank is 100.

Morningstar Risk scores for a given time period (three, five, or 10 years) reflect the Fund's Morningstar risk score plotted on a bell curve: Monthly calculations are based on whether the Fund scores in the top 10% of its category, its risk score is considered High; if it falls in the next 22.5% Above Average; a place in the middle 35% is Average; those lower still, in the next 22.5%, are Below Average and the bottom Low. Overall Morningstar risk score is a weighted average of the available three, five, and 10 year Morningstar risk scores. Investments with less than three years of performance history are not rated.

Fund holdings and/or sector allocations are subject to change and are not recommendations to buy or sell any security.

The S&P MidCap 400® Index measures the performance of 400 mid-sized companies. It is not possible to invest in an index. Sharpe Ratio is a measure that uses standard deviation and excess return to determine reward per unit of risk. The greater a fund's Sharpe ratio, the better its risk-adjusted performance has been. Standard deviation of returns measures the average a return series deviates from its mean. It is often used as a measure of risk. When a fund has a high standard deviation, the predicted range of performance implies greater volatility. Market capitalization (Market cap) is the total market value of all outstanding shares.
